1.0 Introduction

The *Waste Avoidance and Resource Recovery Strategy 2030* (Waste Strategy) was released on 10 February 2019, and sets ambitious targets for Western Australia to become a sustainable, low-waste, circular economy in which human health and the environment are protected from the impacts of waste. The Waste Strategy is available at www.wasteauthority.wa.gov.au.

The Waste Strategy includes the following headline strategy:

Implement local government waste plans, which align local government waste planning processes with the *Waste and Resource Recovery Strategy 2030*.

Local governments¹ and regional local governments (commonly referred to as regional councils) have an important contribution to make to the Waste Strategy vision for the state. Aligning waste services through a waste plan consistent with the Waste Strategy provides a mechanism for them to contribute to, and achieve the targets and objectives of, the Waste Strategy, and to increase consistency in waste planning across local government.

Section 40(4) of the *Waste Avoidance and Resource Recovery Act 2007* (WARR Act) gives the Chief Executive Officer (CEO) of the Department of Water and Environmental Regulation (the department) powers to require local governments to include within its plan for the future² a waste plan outlining how waste services provided by the local government will be managed to achieve consistency with the Waste Strategy in the protection of human health and the environment.

Section 44(1) of the WARR Act gives the CEO of the department powers to require a local government to submit a report to the CEO on the implementation of its waste plan, and may require that any or all of the information in section 44(2) of the WARR Act be included in the report information.

Waste plans will inform and be informed by the strategic planning activities which local governments undertake under the requirements of the *Local Government Act 1995* (LG Act) (s.1.4).

¹ The definition in section 3(1) of the *Waste Avoidance and Resource Recovery Act 2007* of local government includes 'a regional local government established for the purpose of providing waste services'. A regional local government is established under section 3.61 of the *Local Government Act 1995*, which provides in section 3.61(1):

Two or more local governments (referred to in this Division as the participants) may, with the Minister's approval, establish a regional local government to do things, for the participants, for any purpose for which a local government can do things under this Act or any other Act.

² 'Plan for the future' means a plan made under section 5.56 of the *Local Government Act 1995* and Divisions 1 and 3 of Part 5 of the *Local Government (Administration) Regulations 1996*.

1.1 Purpose of guideline

This guideline is to assist local governments and regional councils to prepare and report on waste plans consistent with the requirements of the department's CEO. It provides waste plan templates (attached Excel document), guidance for completion, and timelines for implementation, reporting and review of waste plans. These guidelines will help local governments and regional councils to use the waste plan templates to prepare their waste plans and their annual reports.

1.2 Waste Avoidance and Resource Recovery Strategy 2030

The objectives of the Waste Strategy are to generate less waste, recover more value and resources from waste, and protect the environment by managing waste responsibly (Table 1).

The waste hierarchy and circular economy

The waste hierarchy and circular economy are central to the Waste Strategy. The waste hierarchy ranks waste management options in order of their general environmental desirability with avoiding the generation of waste being the most preferred option and disposing of waste being the least preferred. A circular economy complements the waste hierarchy – it aims to keep materials and energy circulating in the economy for as long as possible. Consistent with the waste hierarchy and circular economy, the strategy recognises that material recovery is preferable to energy recovery, and energy recovery is preferable to landfill.

The waste management activities included in waste plans should be consistent with waste hierarchy and circular economy principles.

Local government: waste generators and waste managers

The Waste Strategy recognises the roles that different individuals and organisations have in generating and managing waste. Local governments are both generators of waste (waste resulting from services local government provides to the community), and managers of waste (providing household waste collection and recycling services, operating waste facilities, and delivering education and awareness programs).

Many of the targets, objectives and strategies of the Waste Strategy are relevant to the waste management activities of local government, and a number of the targets relate specifically to municipal solid waste (MSW) (Table 1 below).

Table 1: Waste Strategy vision, objectives and targets

Vision: Western Australia will become a sustainable, low-waste, circular economy in which human health and the environment are protected from the impacts of waste

Objectives	Avoid Western Australians generate less waste	Recover Western Australians recover more value and resources from waste	Protect Western Australians protect the environment by managing waste responsibly
State targets	2025: 10% reduction in waste generation per capita 2030: 20% reduction in waste generation per capita	2025: Increase material recovery to 70% 2025: All local governments in the Perth metropolitan region¹ and Peel region² (Perth and Peel regions) provide consistent three-bin kerbside collection systems that include separation of Food Organics and Garden Organics (FOGO) from other waste categories 2030: Increase material recovery to 75% - From 2020: Recover energy only from residual waste	2030: No more than 15% of Perth and Peel regions' waste is disposed to landfill 2030: All waste is managed by and/or disposed to better practice facilities
Community			
Targets for waste generators	2025: Reduction in MSW generation per capita by 5% 2030: Reduction in MSW generation per capita by 10%	2020: Increase MSW material recovery to 65% in the Perth and Peel regions, 50% in major regional centres³ 2025: Increase MSW recovery to 67% in the Perth and Peel regions, 55% in major regional centres 2030: Increase MSW material recovery to 70% in the Perth and Peel regions, 60% in major regional centres	2030: Move towards zero illegal dumping 2030: Move towards zero littering

Objectives	Avoid Western Australians generate less waste	Recover Western Australians recover more value and resources from waste	Protect Western Australians protect the environment by managing waste responsibly
	Government and industry		
Targets for waste generators	- Reduction in construction and demolition (C&D) waste generation per capita by 15% by 2025, 30% by 2030 - Reduction in commercial and industrial (C&I) waste generation per capita by 5% by 2025, 10% by 2030	- C&D sector: Increase material recovery to 75% by 2020, 77% by 2025, 80% by 2030 - C&I sector: Increase material recovery to 70% by 2020, 75% by 2025, 80% by 2030	2030: Move towards zero illegal dumping
	Waste industry		
Targets for waste managers	2030: All waste is managed and/or disposed using better practice approaches	2030: All waste facilities adopt resource recovery better practice	2030: No more than 15% of Perth and Peel regions' waste is disposed to landfill 2030: All waste facilities adopt environmental protection better practice

¹ The Perth metropolitan region is the area defined by the Metropolitan Region Scheme (<https://www.dplh.wa.gov.au/mrs>).

² The Peel region is the area defined by the Peel Region Scheme (<https://www.dplh.wa.gov.au/prs>).

³ Albany, Busselton, Bunbury, Greater Geraldton and Kalgoorlie-Boulder

1.3 Waste management tools

Waste plans are the mechanism through which local government and regional councils can strategically work towards achieving consistency with the objectives and targets of the Waste Strategy.

There are a number of waste management tools that local governments and regional councils undertake which may be employed to avoid waste generation, recover more materials from waste, and protect human health and the environment from the impacts of waste. Waste plans are structured around these tools (see sections 3.0, 4.0 and 6.0):

- waste services
- waste infrastructure
- policies and procurement (contracts, local laws and policies, land use planning instruments and sustainable procurement)
- behaviour change programs and initiatives
- data collection.

1.4 Integrated planning and reporting

Integrated planning and reporting (IPR) gives local governments a framework for establishing local priorities, and linking them with operational functions.

All local governments are required to plan for the future of their district under s.5.56 (1) of the LG Act. The plan for the future includes the development of:

- **Strategic Community Plan (SCP):** the local government's principal 10-year strategy and planning document, which outlines the local government's vision and long/medium-term priorities.

- **Corporate Business Plan (CBP):** a four-year delivery program, aligned to the SCP, and accompanied by four-year financial projections.
- **Informing strategies:** these inform, and are informed by, the SCP and CBP. They provide more specific and detailed guidance on strategic direction, and in some cases actions, and include long-term financial plans, asset management plans, workforce plans and issue- or area-specific plans (e.g. information and communication technology plan, recreation strategy, arts and culture plan, economic development strategy, youth plan, local area plan).

Waste plans fit within local government IPR as an issue-specific informing strategy (Figure 1).

As part of a local government's plan for the future, waste plans should inform, and be informed by, the SCP and CBP.

Waste plans should be included in local government strategic reviews of the IPR suite of documents. New expenditure required to implement waste plan actions should also be incorporated into the CBP, Long Term Financial Plan, and annual budgets as appropriate. The timing of waste plans (Section 2.1 below) has been designed to coincide with local government IPR budgeting and strategic planning processes.

More information is available in the [*Integrated Planning and Reporting Framework and Guidelines – September 2016*](#).

Figure 1: Integrated planning and reporting framework

Source: Integrated Planning and Reporting Framework and Guidelines – September 2016.

2.0 Planning and reporting

In this initial phase of the roll-out of waste plans, local governments and regional councils located in the Perth and Peel regions, and major regional centres (Appendix A), are required to develop waste plans by completing each component of the local government waste plan templates (see section 2.1 below).

Table 2: Waste plan requirements

Local governments and regional councils in Perth and Peel & major regional centres

All other local governments and regional councils

Required to develop waste plans for 2020–21 financial year

Not required to develop waste plans, but may choose to do so

Phase 1
of waste plans
roll out

Waste plans will be in place, and will be in the process of being implemented

May be required to develop waste plans, date of implementation to be determined

Phase 2
of waste plans
roll out

Some local governments and regional councils may already have current waste plans or strategies. To avoid duplication, as long as the current waste plan/strategy meets the requirements of the **self-assessment checklist for Part 2** (attached editable PDF), it may be integrated into the *Part 2 – Implementation plan*. Where this is the case, hyperlinks and page numbers to the relevant information should be provided in the *Part 2 – Implementation plan* template (attached Excel document).

Part 1 – Services and performance and the self-assessment checklist for Part 1 will still need to be reviewed and completed by each local government and regional council. It is expected that by completion of the next Waste Strategy review (approximately 2023/24), all local governments and regional councils will transition to using the waste plan templates provided by the department.

Progress on the implementation of waste plans will be reported on annually (see Section 2.2 for more details), and waste plans may be modified and updated during their period of implementation.

Note: regional council waste plans will differ significantly from local government waste plans as regional councils' operations vary substantially. With this in mind, depending on the operational/education/service functions in place in a particular regional council, some sections of the regional council waste plan templates may/may not be applicable to them.

2.1 Initial development of waste plans

Waste plans will consist of two documents:

1. Templates: *Part 1 – Services and performance* and *Part 2 – Implementation plan* (one Excel document)
2. Self-assessment checklists for Part 1 and Part 2 (one editable PDF)

Where possible, the department will pre-fill sections of *Part 1 – Services and performance*. Data will be derived from individual local governments' and regional councils' historical waste and recycling census data.

Given the differing needs, resources and capabilities of local governments and regional councils, there is no expectation of a 'one size fits all' approach to waste plans. The level of detail and types of actions in *Part 2 – Implementation plan* can be adapted as long as the plan meets the requirements outlined in the self-assessment checklist for Part 2.

The aim of the templates is to ensure consistency, and to allow flexibility. Once Parts 1 and 2 are complete, local governments and regional councils must use the self-assessment checklists to ensure all key information is included in their waste plan. The templates (Parts 1 and 2) and the self-assessment checklists are then submitted to the department's CEO.

To assist local governments and regional councils in meeting their waste plan requirements, the department will run workshops in early December on how to develop waste plans.

Waste plans should be included in the councillor consultation processes for the CBP, annual budget and informing strategies undertaken in 2020. Once waste plans have been adopted by the council, the waste plan will be submitted to the department's CEO for endorsement (Figure 2 below). To ensure CEO endorsement of final waste plans, where possible the department encourages local governments and regional councils to submit their draft waste plan for comment prior to councillor consultation processes (see Figure 2 below for more details). The department will endeavour to provide feedback on the draft waste plan within 30 days of receiving it.

The CEO will endorse each waste plan once it has been assessed as meeting the requirements specified in the self-assessment checklists and within 60 days of receiving it. If the waste plan is assessed as not meeting these requirements, the department will advise the local government/regional council of the reason for this and enter into a conversation to develop a resolution, which will be determined on a case-by-case basis. Note: the department does not intend to release individual waste plans publicly.

Figure 2: Key dates

2.2 Annual reporting requirements

Progress reports are a useful tool for communicating the results of monitoring and evaluation and for sharing successes and lessons learnt.

Local governments and regional councils will report on the implementation of waste plans annually. The annual report will be due to the department by **1 October** each year, beginning in October 2021. Annual reports will report on activities undertaken in the preceding year. For example, an annual report submitted on 1 October 2021 will report on activities undertaken by the local government in the 2020–21 financial year. A draft template for annual reporting is provided in Appendix B.

To reduce the reporting burden on local government and regional councils, it is proposed that annual progress reports for waste plans are submitted through the same online reporting system that is being developed for annual mandatory data reporting, which local governments are required to do from 2020, under amendments to the Waste Avoidance and Resource Recovery Regulations 2008 (WARR Regulations). The department is developing an online reporting system for this purpose. It is anticipated that this reporting will be in a similar format to the annual Local Government Waste and Recycling Census, with some additional sections/questions related to waste plans

2.3 Major review of waste plan requirements

To ensure consistency with the Waste Strategy, major reviews of waste plans will occur following the review and release of each Waste Strategy. Waste Strategy reviews are initiated five years after release, however the time taken to complete reviews varies. Major waste plan reviews will therefore occur approximately every five years.

3.0 How to complete *Part 1 - Services and performance template*

Part 1 of the waste plan describes each local government's and regional council's current waste management performance. It also includes a review of the waste management tools that they can undertake to work towards achieving the Waste Strategy targets, including: waste services, infrastructure, policy and procurement, behaviour change programs and initiatives, and data collection.

The aim of *Part 1 – Services and performance* is to:

- identify how the local government/regional council is performing in relation to the three objectives of the Waste Strategy
- identify the major waste management challenges for the local government
- identify strategic waste and resource recovery infrastructure needs
- establish an evidence base to inform decision-making and target setting when developing the *Part 2 - Implementation plan*
- provide a baseline to compare progress when annually reviewing and updating waste plans.

Some of the information required under *Part 1 – Services and performance* (attached Excel document) is already reported by local governments/regional councils to the department under the annual Local Government Census. Where the department already has this data, it will be prefilled in the template before the template is sent for completion. Prefilled data must be reviewed and updated if necessary by the local government/regional council. There are also spaces for to fill in data and provide additional comments and contextual information if required.

4.0 How to complete *Part 2 - Implementation plan template*

Implementation plans outline the actions which the local government/ regional council will take to contribute to the achievement of relevant Waste Strategy targets and objectives. It is where the priorities described in the summary in the Local Government Waste Plan Template (Part 1 – 7.0 Summary) are translated into actions.

Many local governments and regional councils will have projects/ programs that predate their new waste plan, but which are already contributing to Waste Strategy targets and objectives. These existing actions can be included in the implementation plan, as long as new actions are proposed where gaps exist in progressing towards the Waste Strategy targets and objectives.

Each local government/regional council should determine what kinds of actions best suit their local circumstances and needs, noting that all actions should be undertaken in alignment with the Waste Strategy, and contribute to the achievement of Waste Strategy targets and objectives. **It is expected that implementation plans contain a minimum of one action per each of the five waste management tools** (see section 6.0 below). Actions should be SMART: specific, measurable, attainable, realistic and time-bound.

It is not a requirement that local governments/regional councils meet every Waste Strategy target, however they do need to demonstrate that they are **moving** in the right direction towards meeting them, and contributing to the overall state targets.

5.0 Better practice

The Waste Strategy defines better practice as the practices and approaches that are considered by the Waste Authority to be outcomes-focused, effective and high performing, which have been identified based on evidence and benchmarking against comparable jurisdictions. In consultation with relevant stakeholders, the Waste Authority will identify better practice priorities, develop better practice guidance documents and encourage their adoption.

The achievement of better practice forms part of the targets for all three objectives of the Waste Strategy. A number of Waste Authority better practice guidelines already exist, and the Waste Strategy highlights a number of others which will be developed (Table 3 below). In the absence of Waste Authority-approved better practice approaches, councils are encouraged to report on WALGA approved approaches and initiatives where these are consistent with, and complement the State Government and Waste Authority's policies, priorities and approved approaches.

Table 3: Better practice guidelines and programs related to waste management tools

	Waste Authority better practice guidelines	Other guidance	WARR Account-funded programs

¹ The Community and Industry Engagement program (CIE) is a State Government program administered by the Waste Authority which supports projects that contribute to the Waste Strategy's objectives and targets

6.0 Waste management tools

The *Part 2 - Implementation plan* (attached Excel document) template encourages local governments/regional councils to consider how Waste Strategy targets and objectives (avoid, recover & protect) can be best met using the one of the following five waste management tools at their disposal:

- waste services
- waste infrastructure
- policy and procurement (contracts, local waste laws and policies, land use planning instruments, sustainable procurement)
- behaviour change programs and initiatives
- data collection.

Note: Regional councils vary in their operational/education/service functions offered. As a result, some of the waste management tools listed may/may not be applicable to a regional council.

The better practice guidelines, other guidelines and WARR Account-funded programs listed in Table 3 above should be considered when developing actions for each waste management tool.

Further details on things to consider when developing actions for each of the five waste management tools are provided below. **It is expected that implementation plans contain a minimum of one action per each of the five waste management tools.**

6.1 Waste services

Alignment with Waste Strategy objectives and targets

To align waste management practices with the Waste Strategy, local governments/regional councils should consider the following when developing actions related to waste services:

- **Better practice:** waste services should be moving towards better practice (as per guidelines, where available).
- **Avoid waste generation:** options should be considered for managing waste services in a way which encourages avoidance of waste generation and reduces incidence of litter and/or illegally dumped waste.
- **Increased recovery:** waste services should be managed in a way which aims to decrease contamination and increase recovery.
- **Residual waste:** waste services should be managed in a way which aims to reduce the amount of residual waste that they generate, and the amount of residual waste disposed of to landfill³.
- **FOGO:** all local governments in the Perth and Peel regions should be moving toward providing consistent three bin kerbside collection systems that include separation of FOGO from other waste categories by 2025 (as per better practice guidelines).

³ According to the Waste Authority's [Waste to Energy Position Statement](#) (2013), energy recovery is a recognised option at the lower end of the waste hierarchy, which may be suitable for residual waste. Energy recovery is more favourable than disposal to landfill, but less favourable than the options of avoidance, re-use, reprocessing and recycling.

It is expected that the implementation plan:

- Includes action/s that aim to improve MSW recovery rates, which will contribute to Waste Strategy recovery targets for 2020, 2025 and 2030.
- Demonstrates a clear path to implementing better practice kerbside collection systems that include FOGO (as per the guidelines) by 2025 (**note:** Perth and Peel regions only). Where a local government cannot demonstrate this, a detailed explanation on why needs to be provided.
- Includes actions encouraging avoidance of litter.
- Includes actions encouraging avoidance of illegally dumped waste.
- Takes into account better practice guidelines, and other available guidance (Table 3 above).

Local governments (and regional councils, where relevant) should also consider the following when developing implementation plan actions:

- Obtaining support for actions through WARR Account-funded programs (e.g. Better Bins).
- Participating in product stewardship schemes; for example, for televisions and computers (National Computer and Television Recycling Scheme), mobile phones (MobileMuster), paint (PaintBack), tyres (Tyre Stewardship Australia), and Container Deposit Scheme.
- Finding alternatives to landfill for disposal of residual waste.
- Considering activities which could improve litter data, and help target actions to where they are most needed, for example: where are the main litter hotspots? What are the most common materials littered? Does littering happen more at certain times of the year? Are there alternatives to landfill for disposal of litter?

- Considering activities which could improve illegal dumping data, and help target actions to where they are most needed, for example: where are the main illegal dumping hotspots? What are the most common materials dumped? Does dumping happen more at certain times of the year? Are there alternatives to landfill for illegally dumped waste?

6.2 Waste infrastructure

This section of the implementation plan is only applicable to local governments/regional councils that operate waste facilities, such as landfills (registered or licenced), transfer stations and HHW facilities.

Alignment with Waste Strategy objectives and targets

Local governments and regional councils should consider the following when developing actions related to waste infrastructure, to align waste management practices with the Waste Strategy:

- **better practice:** waste facilities operated by a local government and regional councils should be moving towards better practice (as per guidelines, where available)
- **increased recovery:** waste facilities should be managed in a way which increases recovery, and decreases contamination
- **residual waste:** waste facilities should be managed in a way which aims to reduce the amount of residual waste that they generate and the amount of residual waste disposed of to landfill.

Ensuring all waste facilities adopt better practice by 2030 is a target of the Waste Strategy, and this should be reflected in implementation plans (where better practice guidelines are available). Potential participation in WARR Account-funded programs should also be considered (Table 3 above).

Local governments and regional councils should also consider the following when developing implementation plan actions:

- A desktop audit of current local government waste facilities (type, capacity, location, expected lifespan etc.) and a future infrastructure needs assessment (waste facilities required to cater for population size and density changes, and work towards Waste Strategy targets).
- Options for proactively and strategically planning for reducing generation of residual waste, and the disposal of residual waste to landfill, to extend the lifespan of existing landfills.

6.3 Policies and procurement (contracts, waste local laws and policies, and land use planning instruments)

Alignment with Waste Strategy objectives and targets

To align waste management practices with the Waste Strategy, local governments (and regional councils, where relevant) should consider the following when developing actions related to policies and procurement:

- **Better practice:** waste local laws should be developed using better practice guidance (WALGA [waste local law template](#)); local governments should aim to engage contractors to demonstrate better practice approaches (as per guidelines, where available).
- **Increased recovery:** local governments should aim to engage contractors that increase recovery and decrease contamination.
- **Residual waste:** local governments should aim to engage contractors which reduce the amount of residual waste that they generate, and recover energy only from residual waste.

Local governments should also consider the following when developing implementation plan actions:

- including the development and adoption of a waste local law (based on WALGA [waste local law template](#)), if the local government does not already have a waste local law in place
- taking into account better practice guidelines, and other available guidance (Table 3 above)
- adopting/implementing the WALGA Guidelines for Waste Management Plans
- updating Local Planning Schemes to reflect the Planning and Development (Local Planning Schemes) Regulations 2015 waste definitions
- updating Local Planning Strategies to identify current and future waste facility sites, with adequate buffers
- auditing of the council's largest ticket expenditure and how to incorporate sustainable procurement to encourage greater use of recycled products and support local market development
- developing waste contingency plans in case of disruption or disaster, which aim to avoid waste generation; reducing the risk of illegal dumping; considering better practice options for managing waste; increasing recovery; and decreasing contamination and residual waste
- seeking opportunities which may arise from the expiry of waste service contracts; for example, does the expiry of contracts give the local government an opportunity to seek higher performance standards, collaborate with other local governments in the procurement of services, and/or ensure service providers meet better practice standards?
- checking policy/strategy gaps which could be addressed to improve the local government's waste management performance.

6.4 Behaviour change programs and initiatives

Alignment with Waste Strategy objectives and targets

To align waste management practices with the Waste Strategy, local governments and regional councils should consider the following when developing actions related to behaviour change programs and initiatives:

- **Better practice:** behaviour change programs and initiatives should be consistent with better practice (as per guidelines, where available)
- **Avoid, recover, protect:** behaviour change programs and initiatives should aim to support and contribute to all of the objectives of the Waste Strategy.

There are a number of better practice guidelines, other guidelines and WARR Account-funded programs which should be considered when developing actions aimed at improving behaviour change programs and initiatives (Table 3 above).

Local governments and regional councils should also consider reviewing the effectiveness of current behaviour change programs and initiatives, with a view to incorporating the findings into the design of future behaviour change initiatives.

6.5 Data

Alignment with Waste Strategy objectives and targets

To align waste management practices with the Waste Strategy, local governments and regional councils should consider the following when developing actions related to waste data:

- **Better practice:** waste data collection and reporting should be consistent with better practice (mandatory reporting requirements under WARR Regulations).
- **Avoid, recover, protect:** waste data collection, reporting and analysis should aim to support and contribute to all of the objectives of the Waste Strategy.

The *Part 2 - Implementation plan* (attached Excel document) should include actions to review waste data collection and reporting. This will help to ensure that the local government/regional council and contracted service providers collect the data required to comply with licence conditions and mandatory data reporting requirements, and to ensure that any actions implemented are based on complete and correct data and to assist with the evaluation of these.

7.0 Self-assessment checklists

The self-assessment checklists consist of a checklist for *Part 1 – Services and performance* (Table 1 of attached editable PDF document) and a checklist for *Part 2 – Implementation plan* (Table 2 of attached editable PDF document). The self-assessment checklists will enable local governments and regional councils to make sure all key information is included in their waste plan prior to submitting it. The checklists are to be filled out by the local government/regional council and included with the submission of its waste plan to the department's CEO.

Both checklists require a YES, NO or NOT APPLICABLE response on what sort of action has been undertaken. If a NO or NOT APPLICABLE response is given in the *Part 2 – Implementation plan* checklist, further explanation is required.

A NO response in either checklist does not necessarily mean that the waste plan is incomplete or invalid. Each waste plan will be assessed by the department's CEO on a case-by-case basis. Where the department determines that a local government/regional council has provided a NO response without adequate explanation or indicating how they will still be working towards contributing to a Waste Strategy objective, the department will initiate a conversation with the local government will initiate a conversation with them to understand why they are not addressing this. Action required to address the issue will be determined on a case-by-case basis.

8.0 Glossary

Avoidance	Refers to the prevention or reduction of waste generation and is the most preferred option in the waste hierarchy.
Better practice	Refers to practices and approaches that are considered by the Waste Authority to be outcomes-focused, effective and high performing, which have been identified based on evidence and benchmarking against comparable jurisdictions.
Commercial and industrial waste (C&I)	Solid waste generated by the business sector, state and federal government entities, schools and tertiary institutions.
Commercial waste services	• Refers to drop-off, kerbside, vergeside or other waste services provided by the local government to commercial premises. • Discretionary service, not offered by all local governments
Construction and demolition waste (C&D)	Solid waste produced by demolition and building activities, including road and rail construction and maintenance, and excavation of land associated with construction activities.
Disposal	• Refers to the discharge of waste into the environment, either into landfill or another disposal route. • Is the least preferred option in the waste hierarchy.
Drop-off facilities and services	• Drop-off collections are where reportable waste is delivered to the waste depot (drop-off facility) by the residents of the local government (i.e. self-hauled waste). • Services are provided to collect waste or recyclable materials. • May be temporary or permanent standalone drop-off points for one or more materials, or may form part of other waste facilities (such as landfills or transfer stations). • Note: this does not include HHW drop-off points
Energy recovery	The process of extracting energy from a waste stream through re-use, reprocessing, recycling or recovering energy from waste.
Household hazardous waste (HHW) facility	• Refers to facilities for the drop-off and storage of HHW • Includes consideration of the drop-off and storage procedures and infrastructure, staffing and resourcing, layout, operation and management HHW facilities, etc.

Illegal Dumping	Illegal dumping is the unauthorised discharging or abandonment of waste and is an offence under Section 49A of the <i>Environmental Protection Act 1986</i> . Illegally dumped waste is generally considered to have the following attributes:	
	Volume	> 1 cubic metre
	Environmental impact	Contains items/substances that are potentially noxious or hazardous; potential for environmental harm if material leaks, spreads or degrades
	Type of waste	Commercial or industrial waste; larger-scale household waste
	Reason for offence	Premeditated decision; commercial benefit or avoidance of fee
	Mode of deposition	Deposited using a vehicle
Kerbside waste services	- A regular, containerised collection service (often a wheelie bin) where the waste or recycling is collected from outside a resident's dwelling. - Can apply to either recycling or general waste (and in a few instances green waste).	
Landfill	- Refers to inert or putrescible, registered or licenced landfills - Activities related to the layout, operation, management and post closure of a landfill. - Includes consideration of the technology and infrastructure on site, staffing and resourcing, and any other waste facilities or services at the landfill site (e.g. greenwaste or recycling drop off, mulching, tip shop, etc.)	
Litter	Litter is defined in the <i>Litter Act 1979</i> as including: - all kinds of rubbish, refuse, junk, garbage or scrap - any articles or material abandoned or unwanted by the owner or the person in possession thereof but does not include dust, smoke or other like products emitted or produced during the normal operations of any mining, extractive, primary or manufacturing industry. - Litter is generally considered to have the following attributes:	
	Volume	< 1 cubic metre
	Environmental impact	Nil or minor actual or potential environmental impact
	Type of waste	Personal litter
	Reason for offence	Unpremeditated, convenient disposal
	Mode of deposition	Deposited by hand (includes dropping by hand from a vehicle)
Local government waste management	- Refers to waste generated by a local government in performing its functions - Includes materials such as construction and demolition waste from road and footpath building and maintenance; greenwaste from parks maintenance; waste generated at local government offices, depots, and facilities	
Municipal solid waste (MSW)	Solid waste generated from domestic (residential) premises and local government activities.	
Peel region	The Peel region is the area defined by the Peel Region Scheme .	

Perth metropolitan region	The Perth metropolitan region or the Perth region is the area defined by the Metropolitan Region Scheme .
Public place services	Public place waste services refers to permanent bins provided by local government in public places to collect waste and/or recycling.
Recovery	The process of extracting materials or energy from a waste stream through re use, reprocessing, recycling or recovering energy from waste.
Reuse	Reuse refers to using a material or item again.
Reprocessing	Reprocessing refers to using an item or material that might otherwise become waste during the manufacturing or remanufacturing process.
Recycling	The process by which waste is collected, sorted, processed (including through composting), and converted into raw materials to be used in the production of new products.
Residual Waste	- Waste that remains after the application of a better practice source separation process and recycling system, consistent with the waste hierarchy as described in section 5 of the WARR Act. - Where better practice guidance is not available, an entity's material recovery performance will need to meet or exceed the relevant stream target (depending on its source - MSW, C&I or C&D) for the remaining non-recovered materials to be considered residual waste under this waste strategy.
Special event waste services	Refers to temporary bins and/or waste collection services provided by local government to manage waste generated at events such as fireworks displays, music festivals, sports events, markets etc.
Sustainable procurement	Involves meeting a need for goods and services in a way that achieves value for money and generates benefits not only to the organisation, but also to society and the economy, while minimising damage to the environment.
Transfer station	- Refers to facilities which undertake large scale consolidation of waste or recyclable materials for transfer to another facility for processing or disposal. - Involves activities related to the layout, operation and management of a transfer station. - Includes consideration of the technology and infrastructure on site, staffing and resourcing, and any other waste facilities or services available at the site (e.g. greenwaste or recycling drop off, mulching, tip shop, etc.).
Vergeside waste services	- Vergeside collection services are bulk, infrequent (~every 4-6 month or on demand) services. - Material is collected from residential 'vergesides' either non-containerised or in a skip provided by the local government. Vergeside services may relate to green waste or hard waste - Includes waste and/or recyclable materials that may be mixed or separated and the source and can include green waste or hard waste.
Waste services	Waste services are defined by the <i>Waste Avoidance and Resource Recovery Act 2007</i> as one of the following: - the collection, transport, storage, treatment, processing, sorting, recycling or disposal of waste - the provision of receptacles for the temporary deposit of waste - the provision and management of waste facilities, machinery for the disposal of waste and processes for dealing with waste.

APPENDIX B Annual progress report template

Local governments and regional councils will report to the department annually on the implementation of their waste plans.

The annual progress report on delivering the previous financial year's implementation plan will be due to the department by **1 October** each year, beginning in October 2021 (reporting for the 2020/2021 financial year). Reporting on waste plans will be combined with the required waste data reporting through the online reporting system currently being developed by the department.

As the online reporting tool will be under development throughout 2019–20, the exact form it will take cannot yet be confirmed. It is anticipated that the information required to be reported on waste plan implementation is likely to include:

- list of current waste plan actions
- planned timeline for implementation (completion date) for actions
- indication of whether the actions:
 - have been completed as per implementation date given in waste plan
 - are on track to being completed as per implementation date given in waste plan
 - have not or cannot be completed as per implementation date given in waste plan (with information about why this is the case).

Example of what the annual reporting template may look like:

Action	Is the action being implemented according to the waste plan? If no, please explain why.	Status

List all current actions in waste plan

Please provide information about this action, e.g.

- If in progress, is the action on track to be completed by the due date?
- Are there factors causing the delay of this action?
- Does the action need to be modified or removed from the waste plan? If so how / why?

Please indicate whether this action is:

- Completed
- In progress
- Not completed

Additional Information:

2. Notice to Prepare a Waste Plan

Our ref: DWERDG725/19

Enquiries: (08) 6364 7000

Mr Philip St John
Chief Executive Officer
City of Fremantle

Via email: ceo@fremantle.wa.gov.au

Dear Mr St John

***NOTICE TO PREPARE A WASTE PLAN UNDER SECTION 40(4) OF THE
WASTE AVOIDANCE AND RESOURCE RECOVERY ACT 2007***

Under section 40(4) of the *Waste Avoidance and Resource Recovery Act 2007* (WARR Act), the Chief Executive Officer (CEO) of the department principally assisting the Minister for Environment in the administration of the WARR Act may by written notice require a local government to include within its plan for the future a waste plan outlining how, in order to protect human health and the environment, waste services provided by the local government will be managed to achieve consistency with the Western Australian *Waste Avoidance and Resource Recovery Strategy 2030* (Waste Strategy).

Waste Strategy and waste plans

In line with this, the Waste Strategy includes a headline strategy to “*Implement local government waste plans, which align local government waste planning processes with the Waste Strategy.*”

Waste plans will provide a link between the targets and objectives of the Waste Strategy and local government waste management activities.

The purpose of waste plans is to:

- align local government waste management activities with the Waste Strategy;
- map current performance and establish a benchmark to achieve Waste Strategy targets;
- monitor progress on local government achievement of Waste Strategy targets; and
- design programs and activities which will support the implementation of waste plans.

Who prepares a waste plan?

All local governments and regional local governments (commonly referred to as regional councils) located in the Perth metropolitan region and Peel region (Perth and Peel regions), and major regional centres that provide waste services, are required to develop waste plans for the 2020-21 financial year, and perform their functions in respect of waste management in accordance with their waste plans.

CEO gives notice requiring a waste plan

Consistent with the above, I, Mike Rowe, in my capacity as CEO of the Department of Water and Environmental Regulation (DWER), hereby give notice that the City of Fremantle is required to prepare a waste plan under section 40(4) of the WARR Act. The City of Fremantle's final waste plan, as adopted and endorsed by the City of Fremantle's Council for inclusion in the plan for the future (Final Waste Plan), must be submitted to me by 30 September 2020.

Section 6.2(2) of the *Local Government Act 1995* requires local governments to have regard to their plans for the future (which include waste plans made under section 40 of the WARR Act) in the preparation of their annual budgets.

Content of a waste plan

The City of Fremantle's waste plan must outline how, in order to protect human health and the environment, waste services provided by the local government will be managed to achieve consistency with the Waste Strategy.

Under section 40(3) of the WARR Act the waste plan may include:

- (a) population and development profiles for the local government district;
- (b) an assessment of significant sources and generators of waste received by the local government;
- (c) an assessment of the quantities and classes of waste received by the local government;
- (d) an assessment of the services, markets and facilities for waste received by the local government;
- (e) an assessment of the options for reduction, management and disposal of waste received by the local government;
- (f) proposed strategies and targets for managing and reducing waste received by the local government;
- (g) proposed strategies and targets for the efficient disposal of waste received by the local government that cannot be recovered, reused or recycled;
- (h) an implementation programme that identifies the required action, timeframes, resources and responsibilities for achieving these strategies and targets; and
- (i) such other matters as may be prescribed by the regulations.

The above listed information is included in the waste plan templates to be completed by the City of Fremantle, which consists of two documents:

1. Templates: *Part 1 – Services and performance* and *Part 2 – Implementation plan* (one Excel document).
2. Self-assessment checklists for Part 1 and Part 2 (one editable PDF).

The email this notice is attached to also includes your waste plans resource kit. This consists of a Guidance Document and the City of Fremantle's personalised template.

You have the option to submit the City of Fremantle's draft waste plan to DWER for feedback prior to final submission for adoption and endorsement by the City of Fremantle's Council for inclusion in the plan for the future. The draft waste plan must be submitted by 1 April 2020. Feedback from DWER on the draft waste plan will be provided within 30 days of its receipt.

CEO power to modify or prepare a waste plan

The City of Fremantle's Final Waste Plan will be assessed by DWER. Under section 41(1) of the WARR Act, if, following this assessment, I am of the opinion that your local government's waste plan should, but does not, include a matter referred to in section 40(3), I may by written notice require the City of Fremantle to modify the waste plan to include that matter. Prior to giving this notice, I must consult with the City of Fremantle and have regard to its views, and if asked by the City of Fremantle, consult with the Waste Authority and have regard to its views.

Under section 41(3) of the WARR Act, the City of Fremantle must comply with the section 41(1) notice as soon as is practicable.

Note that under section 41(4) of the WARR Act, a contravention of this notice given under section 40(4) of the WARR Act, or a notice given under section 41(1), may result in me serving a notice in writing on the City of Fremantle –

- (a) specifying the relevant notice and the manner in which your local government has failed to comply with it; and
- (b) advising your local government that I intend to deal with the matter under section 42.

Under section 42 of the WARR Act, if the local government does not comply with the CEO of DWER's notices under sections 40(4) and 41(1) of the WARR Act, the CEO may serve notice in writing on the City of Fremantle advising it that the CEO intends to prepare or modify a waste plan for a local government according to the notices, as if the CEO were the local government. This may occur after the CEO consults and has regard to the views of the Waste Authority and your local government.

This waste plan or its modification prepared by the CEO of DWER has effect as if it were part of a plan for the future made by the local government. All costs, charges and expenses incurred by the CEO in this process may be recovered from the local government as a debt due to the Crown or may be deducted from any moneys payable by the Crown to the local government.

Requirement to report

Pursuant to section 44 of the WARR Act, I require reporting on the City of Fremantle's implementation of the waste plan on an annual basis. The first report is due on 1 October 2021, for the 2020-21 financial year. Further information on reporting can be found in Appendix C of the Guidance Document contained within the resource kit.

Right of review

Under sections 41(5), 42(4) and 44(3) of the WARR Act respectively, the City of Fremantle has the power to apply to the State Administrative Tribunal for a review of:

- a notice given under sections 41(4) of the WARR Act;
- a waste plan prepared or modified by the CEO under section 42; or
- a requirement given by the CEO for the local government to report on its implementation of the waste plan under section 44(1).

More information on the process is provided in the attached frequently asked questions. Should you require further information, please enquire at wasteplans@dwer.wa.gov.au.

I very much value our relationship with local government and I look forward to working with the City of Fremantle to collaborate on improving waste management across the State.

Yours sincerely

A handwritten signature in blue ink, appearing to read 'Mike Rowe', with a stylized, flowing script.

Mike Rowe
DIRECTOR GENERAL

7 November 2019

Additional Information: 3. Division 3 of the Waste Avoidance and Resource Recovery Act 2007

3. Division 3 of the Waste Avoidance and Resource Recovery Act 2007 (

40. Waste plans

- (1) *In this section —*
plan for the future means a plan made under the Local Government Act 1995 section 5.56.
- (2) *A local government may include within its plan for the future a waste plan outlining how, in order to protect human health and the environment, waste services provided by the local government in the relevant district will be managed to achieve consistency with the waste strategy.*
- (3) *The waste plan may include —*
 - (a) *population and development profiles for the district;*
 - (b) *an assessment of significant sources and generators of waste received by the local government;*
 - (c) *an assessment of the quantities and classes of waste received by the local government;*
 - (d) *an assessment of the services, markets and facilities for waste received by the local government;*
 - (e) *an assessment of the options for reduction, management and disposal of waste received by the local government;*
 - (f) *proposed strategies and targets for managing and reducing waste received by the local government;*
 - (g) *proposed strategies and targets for the efficient disposal of waste received by the local government that cannot be recovered, reused or recycled;*
 - (h) *an implementation programme that identifies the required action, timeframes, resources and responsibilities for achieving these strategies and targets;*
 - (i) *such other matters as may be prescribed by the regulations.*
- (4) *The CEO may by written notice require a local government to include within its plan for the future a waste plan outlining how, in order to protect human health and the environment, waste services provided by the local government will be managed to achieve consistency with the waste strategy.*
- (5) *The notice may specify a reasonable period within which the waste plan must be included in the plan for the future.*
- (6) *The CEO may, on the request of a local government and at the expense of that local government, prepare a draft waste plan for that local government.*

41. CEO's powers in relation to waste plan

- (1) *If the CEO is of the opinion that a waste plan should, but does not, include a matter referred to in section 40(3), the CEO may, by written notice, require the local government to modify the waste plan to include that matter.*
- (2) *Before giving a notice to a local government under subsection (1) the CEO —*
 - (a) *must consult with the local government and have regard to its views;*
 - and*

- (b) *if the local government so requests, must consult with the Waste Authority and have regard to its views.*
- (3) *A local government must comply with the notice as soon as is practicable.*
- (4) *If the local government does not comply with the notice issued under section 40(4) or under subsection (1), the CEO may serve notice in writing on the local government —*
 - (a) *specifying the relevant notice and the manner in which the local government has failed to comply with it; and*
 - (b) *advising the local government that the CEO intends to deal with the matter under section 42.*
- (5) *A local government aggrieved by a notice given to the local government under subsection (4) may apply to the State Administrative Tribunal for a review of the notice.*

42. CEO may prepare or modify waste plan

- (1) *When a notice has been served on a local government under section 41(4), the CEO may, after consulting and having regard to the views of the Waste Authority and the local government, take all such steps and prepare all such documents as are necessary to ensure compliance with the notice referred to in section 40(4) or 41(1), as the case requires, as if the CEO were the local government.*
- (2) *A waste plan, or modification of a waste plan, for a local government prepared under this section has effect as if it were part of a plan for the future made by the local government.*
- (3) *All costs, charges and expenses incurred by the CEO in the exercise of any powers conferred by subsection (1) may be recovered from the local government as a debt due to the Crown or may be deducted from any moneys payable by the Crown to the local government.*
- (4) *A local government aggrieved by a waste plan, or modification of a waste plan, prepared under this section may apply to the State Administrative Tribunal for a review of the plan or modification.*

43. Effect of waste plan

- (1) *The CEO must have regard to the waste plan of a local government when exercising a function under this Act or any other Act that affects the operation of the waste plan.*
- (2) *A local government must perform its functions in respect of waste management in accordance with its waste plan as existing from time to time.*

44. Report on waste plan

- (1) *The CEO may require a local government to submit a report to the CEO on the implementation of its waste plan.*
- (2) *The CEO may require the local government to include in the report information about any or all of the following matters —*
 - (a) *the quantities of waste of each of the classes identified in the waste plan —*
 - (i) *collected or otherwise received by the local government and its contractors; or*
 - (ii) *reused or recycled by the local government or transferred to other parties for reuse or recycling; or*
 - (iii) *held in stockpiles; or*

- (iv) *disposed of to landfill;*
 - (b) *the number of premises serviced;*
 - (c) *changes made during the reporting period to the nature of the waste services provided;*
 - (d) *complaints lodged with the local government under section 71 and actions taken by the local government in response;*
 - (e) *any other matters specified in the waste plan;*
 - (f) *such other matters as the local government considers appropriate.*
- (3) *A local government aggrieved by a requirement under this section may apply to the State Administrative Tribunal for a review of the requirement.*

Policy

Waste minimisation

Reference number	SG2
Type:	Strategic
Legislation:	<i>National environment protection council Environmental protection regulations Health local laws 1997 Health Act 1911-s26 and s115</i>
Procedure:	NA
Delegation:	NA
Other related document:	NA

Objective

Through its policies and practices, the City of Fremantle aims to work with the community, the regional council and other government agencies to achieve a significant but achievable reduction in the amount of waste going to landfill.

Policy

1. Waste hierarchy

Council endorses a waste management hierarchy, in order of priority, as follows:-

- waste avoidance
- waste reduction
- waste re-use
- recycling
- waste treatment
- waste disposal
- landfill gas recovery

2. Waste avoidance

To ensure maximum participation and support for waste minimisation, Council will participate in public awareness and education programs for both the community and business, particularly with regard to the need to avoid or reduce packaging.

3. Waste reduction

The importance of home and regional composting is recognised. The council is a participant in the Southern Metropolitan Regional Council that is developing the Regional Resource Recovery Centre (RRRS) at Canningvale. A dual bin system has been introduced to recycle waste material and composting of solid wastes.

4. Water re-use

Council supports chipping/shredding and mulching as a method of waste minimisation including the removal of garden waste from the waste stream. This is achieved by the RRRS where green waste is chipped and distributed for reuse. The council provides a green waste verge pick up service four times per annum.

5. Recycling

Council supports recycling as an important method of waste minimisation, through recycling centres and kerbside collection systems. The SMRC conducts a full recycling program through the RRRS in which the council is a full participant. A yellow topped bin is provided to every residential home to enable recycling to the SMRC.

6. Waste treatment

Council supports the diversion from the waste stream of poisonous, hazardous or heavy metal household, industrial and commercial waste for re-use, recycling or disposal by the most appropriate method.

7. Waste disposal

Council supports the regional processing of waste at the Southern Metropolitan Regional Council's Regional Resource Recovery Centre. The Council is a participant in the RRRS and proportionally funds the recycling and composting facilities at the Centre.

Council supports the enforcement of relevant local laws and the creation of new local laws if appropriate, to control illegal or unauthorised dumping of waste.
